Both in vivo and in vitro protocols are illustrated, so that the metastatic process can be either analysed as a whole, or single events addressed separately. Sun, 14 Oct 2018 21:43:00 GMT Cancer Metastasis: Experimental Approaches, Volume 29 ... - Clinical realities and experimental approaches to the study of the basic mechanisms of metastasis formation are discussed. Results are reported, which led to the development of theoretical concepts. Such results and concepts are evaluated with their possible impact for the design of new treatment strategies and experimental findings from many diverse research fields are also summarized. The process of metastasis is a dynamic event that can be described as a sequence of interrelated steps ... This process involves both the selection of traits Wed, 16 Jan 2019 09:22:00 GMT Cancer Metastasis: Building a Framework - UB - Cancer metastasis: experimental approaches, theoretical concepts, and impacts for treatment strategies. Schirmacher V. It has been the purpose of this article to describe recent advances in cancer metastasis research. Clinical realities and experimental approaches to the study of underlying basic mechanisms of metastasis formation were discussed. Wherever possible, results were reported which led to the development of theoretical concepts. Such results and concepts were finally evaluated in ... Tue, 20 Aug 2013 23:57:00 GMT Cancer metastasis: experimental approaches, theoretical ... - Clinical & Experimental Metastasis is an international, multidisciplinary journal devoted to the rapid publication of fundamental advances in basic and applied metastasis research. The coverage encompasses

all aspects of metastasis research, whether laboratory-based, experimental or clinical and therapeutic. Sun, 25 Nov 2018 21:08:00 GMT Clinical & Experimental Metastasis - Springer - The athymic or "nude" mouse has been employed for a variety of experimental analyses of tumor growth, invasion, and metastasis. This chapter describes two types of experimental design for studying metastasis in vivo. The spontaneous metastasis models assess the ability of cells to disseminate from a local tumor, and are commonly initiated by the injection of the cells into an organ reflecting the tissue of origin of the cancer (orthotopic injection). Models of experimental metastasis ... what is known about the general process of cancer metastasis. Other chapters in this volume will provide a more detailed overview of metastasis from, and to, specific organs. Thu, 10 Jan 2019 17:57:00 GMT
